PROFESSIONAL SUMMARY

Applied AI Engineer with 6+ years shipping production LLM systems to enterprise and partner customers. Currently leading RAG platform development at Acme Corp, where I partner directly with customer engineering teams to advise on evals, agent architectures, and cost-latency tradeoffs. Proven record of turning vague partner goals into shipped agent pipelines, and of raising the technical floor for teams that don't yet have deep LLM experience.

WORK EXPERIENCE

Acme Corp **Remote**

Senior AI Engineer, Applied AI Platform *04/2024 – present*

- Architected and deployed a production RAG platform integrating a primary LLM provider, a vector database, and a structured-output grounding layer, serving 500+ enterprise workspaces since public launch.
- Led the evaluation pipeline design using golden-set scoring plus online sampling, cutting regression-detection time 30% across model upgrades and giving partner teams a shared quality baseline they could trust.
- Served as the deep technical partner to 8+ enterprise customers, advising on agent architectures, context engineering, and cost optimization; produced reference implementations partners shipped to their own users.
- Produced 25+ architecture guides, benchmarks, and reference implementations used as public goods across the platform's partner ecosystem, reducing onboarding support tickets by 22%.

Beacon Systems **Remote**

Platform Engineer, Partnerships *01/2023 – 03/2024*

- Built partner integrations using Ruby on Rails, React, and TypeScript, automating service workflows across the platform and earning trust with technical founders on partner engineering teams.
- Developed integration frameworks and sample code that increased partner engagement by 45% and reduced integration time by 2 weeks.
- Led coordination between Product and Engineering to convert partner feedback into API improvements, contributing to a 20% increase in overall platform adoption.

Northwind Consulting **San Francisco, CA**

Software Engineer *07/2021 – 12/2022*

- Modernized enterprise applications by migrating legacy systems to Rails-based infrastructure, decreasing delivery time by 15% while pair-programming with client engineering teams.
- Facilitated architecture workshops translating complex business workflows into scalable systems; these workshops became the foundation for client-side engineering onboarding.

TECHNICAL PROJECTS

Agent Playground: Open-Source LLM Evaluation Harness
github.com/jordanchen/agent-playground

- Built open-source eval harness for multi-turn LLM agents with golden-set scoring, online sampling, and regression detection across model upgrades — directly on-point for partner eval-advisory work.
- Shipped reference implementations for five common agent patterns, adopted by 200+ developers since release.

Chatgrounding: RAG Reference Implementation
github.com/jordanchen/chatgrounding

- Built full-stack RAG reference on a public LLM API with document grounding and multi-turn memory, demonstrating applied RAG without heavy frameworks — the same approach I recommend to partners standing up their first grounded agent.
- Published as an open-source starter for businesses deploying embedded AI chat: marketing site, chat widget, and retrieval layer.

VOLUNTEER COMMUNITY INVOLVEMENT

AI Builders Meetup: Organizer *2022 – present*

- Organized monthly technical meetups on LLM systems engineering, growing regional attendance to 300+ recurring members; this is where my love of teaching engineers through systems got operationalized.
- Hosted sessions on applied AI integration patterns and eval design, lifting session engagement 90% year over year.

SKILLS

- **AI Systems:** OpenAI / Anthropic / Cohere APIs, LLM integration, agent orchestration, RAG, multi-model evaluation, context engineering, prompt design, Agent Skills + MCP familiarity
- **Data + retrieval:** vector databases, embeddings, hybrid search, document chunking strategies
- **API design:** REST + streaming APIs, documentation, integration architecture
- **DevOps:** Docker, CI/CD, GitHub Actions, observability
- **Languages:** Python, TypeScript, Ruby, JavaScript
- **Frameworks:** Ruby on Rails, React, Node.js

EDUCATION

- **State University:** B.S., Computer Science
- **Online AI Program:** Certificate, Applied LLM Systems
